

The Weekly Roundup
Week of Feb 6-10
8th Physical Science

This week, after wrapping up our study of materials such as polymers, alloys, and interesting events like radioactive decay, we will be diving into a more hands-on topic: Motion!

Students should be prepared to cover the first sections of Chapter 9, as well as participate in a class lab and an experiment, both relating to motion and our perception. This is a long chapter, so we will have several opportunities to explore, hypothesize and test what we know about motion.

As well, 8th graders should keep their eye on the OPI Notebook assignments due. Monday (today), vocabulary was to be turned in; the Poem assignment is due on Wednesday. Notecards for the research paper are due the following Monday, 2/13. Rubrics for assignment expectations are included in the OPI Notebook. Please contact me if you have questions regarding these assignments.

These items should keep us occupied for the time being. Again, if there are any questions or you need clarification, please email, phone, or ask in class!
